The programme develops strong foundations in computing, mathematics, machine learning, data science and generative AI. Students graduate prepared to build ethical, scalable and real-world AI solutions across industries. The programme combines global academic standards with ISBF's strong analytical and quantitative teaching environment, preparing students for careers in AI engineering, data science, consulting and advanced postgraduate study worldwide. Students graduate with the ability to design, build and evaluate intelligent systems and translate AI capabilities into real-world impact.

Curriculum structure and specialised learning

- ✓ **Computing, Mathematics & Data Foundations**
- ✓ **Artificial Intelligence & Machine Learning**
- ✓ **Deep Learning & Generative AI**
- ✓ **Responsible and Ethical AI**
- ✓ **Research Methods & AI Capstone Project**

AI Mentors

Rohan Katyal

MSc Computer Science & Human Computer Interaction, Georgia Institute of Technology
Founder at Milana AI, Ex Meta

Aditya G

MBA, Harvard Business School
Founder, WaterCooler Dev and Koan Analytics
